Around the world, 1.3 billion people lack access to electricity. More than 600 million are in sub-Saharan Africa, and more than 300 million are in India alone. Providing electric power to these unserved populations will cause a significant jump in demand in the coming decades. India has promised to place an emphasis on renewable sources of energy; there are programs in Africa to create "mini-grids" using renewables. But as electricity-generating capacity inevitably grows ever larger, India and the other countries of the developing world will not be able to avoid the increased use of fossil fuel. No electricity results in a complete loss of normality. We are exploring alternative energy sources, living off the grid and how life with no electricity impacts us, to make you think, could you live without electricity? Living with no electricity might not be as easy as you may think and you not realise how many items in your home rely on it to function. If you plan on trying to live without electricity, you will no longer be able to turn on the central heating in your home, use the toilet, preserve food in your fridge/freezer or have clean running water. Some people prefer to not be so reliant on electrical energy and opt for an off-the-grid lifestyle, utilising alternative energy sources for their power.
