A region of interest (often abbreviated ROI), are samples within a data set identified for a particular purpose. The concept of a ROI is commonly used in many application areas. For example, in medical imaging, the boundaries of a tumor may be defined on an image or in a volume, for the purpose of measuring its size. The endocardial border may be defined on an image, perhaps during different phases of the cardiac cycle, for example, end-systole and end-diastole, for the purpose of assessing cardiac Area of Interest or fields of interests are an important part of the organization of a CV. Here you list what you are studying, or what of all you have studied is your preference. Areas of interest are your specialties or concentration of what you're in process of becoming expert. They're usually also your competencies, or the areas in which you are ready to teach (or preparing to teach). There's no absolute format for a CV, but some institutions will make your job a lot easier by just suggesting what they expect to see. Normally it will include the following: Your name, address (contact info), your education and dissertation(s); awards you may have received, fellowships in progress or completed.
