In his book *The Monkey Business* (1982) paleontologist Niles Eldredge wrote that no author who published in the *Creation Research Society Quarterly* "has contributed a single article to any reputable scientific journal" (p.83). Apparently Eldredge couldn't be bothered to glance at the Science Citation Index or any other major science bibliographic source. He has about 30 published articles in mainstream technical journals from 1968 to the present. In the last eight years a lot of his work has been classified, so there has been less of it in the open literature. Find out information about Refereed journal. Having one or more programmers review the source code of a program written by someone else. Peer review produces much better code, since others have already Explanation of Refereed journal. Overall, reported time spent on research activities positively affects research productivity in four of the six items shown (recent refereed journal articles; book reviews, chapters, and creative works; books, textbooks, and reports; and presentations). Factors related to faculty research productivity and implications for academic planners: planners must align the emphasis on research and scholarly products with the overall institutional mission. Chapters from edited books also often get used for teaching purposes as, of course, do journal articles. But unless the writer belongs to the Society of Authors, or something similar " a body which can collect copyright payments on behalf of authors " they won't necessarily know this to be the case. Use of chapters for teaching purposes doesn't always (or perhaps even often) result in citations in Google Scholar and other citation indices, even though the material may well be used extensively in essays and dissertations. Finally, in my field, edited books often end up in libraries in countries... The sad fact is that for employment, promotion and those elusive bids, books and refereed journal articles count more than chapters.
